

Table of Contents

Preamble

Introduction

1. Will You Get Ahead of History, or Will History Catch Up with You?
2. A Line of Inquiry with Deep Roots
3. Confronting the Objection with Other Interlocutors
4. An Objection Must Be Judged on Its Own Merits
5. Why a Thought Experiment Can Become Decisive
6. The Difficulty of Recognizing What Comes from Outside
7. Getting Ahead of History
8. Truth, Error and Paradigm Shift
9. From Conceptual Foundations to a Theory of the Universe

Chapter 1 — From a Conceptual Postulate to a Transdisciplinary Research Project

1. An Earlier Idea, Gradually Reformulated
2. Submission of the Idea to the Templeton World Charity Foundation
3. The Argument from Motion Revisited
4. “It Remains, Therefore, to Apply This Perspective to Space and Motion”
5. A Relational Conception of Space and Motion
6. From Individual Research to a Transdisciplinary Project
7. The Emerging Research Program

Chapter 2 — The Logical Reasoning: The Spacecraft and Missile Objection

1. From the Conceptual Proposition to Logical Examination
2. Logical Analysis of the Spacecraft and Missile Objection
 - 2.1. Preliminary Distinction
 - 2.2. Logical Chain of the Objection
3. Condensed Logical Form
4. Conclusion Drawn from the Reasoning
5. The Decisive Premise
6. Scope of the Reasoning
7. Historical Note
8. From the Reasoning to the Objections

Chapter 3 — From the Spacecraft and Missile Objection to the Conceptual Foundations of Physics

1. From Mathematical Description to Physical Existence
2. The Response Based on Spacelike Intervals
3. Does the Spacecraft's Acceleration Constitute a Difficulty?
4. Is the Missile Actually Modified?
5. The Particular Problem of the Missile's Trajectory
6. What the Objection Establishes — and What It Does Not Establish
7. From Absolute Simultaneity to the Uniqueness of Becoming
8. A Lorentzian Solution Remains Possible
9. Motion Relative to What?
10. From the Relativistic Problem to Protophysical Concepts

Chapter 4 — Semi-Closed Time Loops, the Consistency Principle, and the Question of the Universal Present

1. A Fundamental Distinction: The Operational and the Physical
2. Mathematical Formalism and Physical Interpretation
3. From Absolute Simultaneity to the Universal Present
4. Time Loops in General Relativity
5. Marc Lachièze-Rey's Book: Following the Theory Through to Its Consequences
6. "None of the Theory's Predictions Can Violate Logic"
7. Does the Consistency Principle Intervene After the Fact?
8. Is There a Consistency Difficulty in the Formalism Itself?
9. An Important Observation by Marc Lachièze-Rey Himself
10. Another Possibility: The Physical Conditions Can Never Be Met
11. How Can We Rejoin What Is No Longer Actual?
12. The Consistency Principle Could Then Intervene Much Further Upstream
13. Special Relativity and General Relativity: Two Problems That Must Not Be Confused
14. Marc Lachièze-Rey: A Reflection That Continues to Evolve
15. From Consistency to the Universal Present

Chapter 5 — From the Aether to a Relational Conception of Physical Reality

1. From Causality to the Existence of Physical Realities
2. Does the Aether Constitute a Genuine Alternative?
3. How Far Can an Explanation by the Aether Go?

4. Can a Mechanical Aether Be Sufficient?
5. From Medium to Relation
6. From Relation to Motion

Chapter 6 — From the Universal Present to Time, Becoming, and the Driving Principle

1. From Physical Existence to Absolute Simultaneity
2. From Absolute Simultaneity to the Universal Present
3. The Universal Present Is Grounded in the Present Existence of Being
4. The Actuality of Relations and the Existence of Space
5. From the Present to a Change of State of the Universe
6. Reconsidering the Aristotelian Question of Time
7. Time, Duration, and the Passage from One State to Another
8. Universal Present and Plurality of Durations
9. Philosophy and Physics: Distinguishing Levels of Intelligibility
10. Does Motion Require a Presently Operative Cause?
11. Inertia and the Limits of a Mechanical Presently Operative Cause
12. An Exchange with Robert Signore on Inertia and the Cause of Motion
13. Matter, Form, and Presently Operative Causality
14. The Driving Principle and the Immanence of Its Action
15. An Action According to the Determination of the Constituents
16. Interrelation and Unity of Action
17. The Unity of the World and the Meaning of Time

18. The Question of Finality
19. A Metaphysical Problem That Opens onto a Theological Question
20. From Physics to Metaphysics Without Confusing Them

Chapter 7 — From the Encounter Between Philosophy and Physics to the Notion of a System of Thought

1. Physics and the Question of Reality
2. Several Levels of Intelligibility in a Physical Theory
3. A Sufficiently General Definition of Science
4. Causality as a Meeting Point
5. A Practical Encounter Between Philosophy and Physics
6. The Emergence of an Intermediate Domain
7. From the Conceptual Postulate to the System of Thought
8. Reconsidering This Approach Today
9. Five Concepts to Re-examine

Chapter 8 — A First Analysis of Five Fundamental Concepts: Mass, Space, Inertia, Momentum, and Time

1. The Conceptual Postulate
2. Why Begin with Mass?
3. From Mass to Space
4. Attraction, Repulsion, and the Constitution of Space
5. From Space to Inertia
6. From Inertia to Momentum
7. Mass, Inertia, and Momentum

8. Light and Matter: An Open Question
9. From Motion to Time
10. A First Conceptual Architecture
11. From Conceptual Coherence to Scientific Confrontation

Chapter 9 — Confrontation with Current Physics: In Search of Overall Coherence

1. Mass: A Notion That Cannot Be Reduced to a Quantity of Matter
2. Space: From a Container to a Physical Structure
3. The Problem of Inertia
4. Inertia, Gravitation, and the Equivalence Principle
5. Momentum: More Than a Conserved Quantity?
6. Three Aspects of Mass
7. The Equivalence Principle as a Problem to Be Explained
8. Free Fall and Gravitational Force
9. Time, Durations, and Clocks
10. The Twin Paradox: Logical Problem and Search for a Physical Explanation
11. Light, Photon Mass, and the Shapiro Effect
12. What This Confrontation Does — and Does Not — Allow Us to Conclude

Chapter 10 — Momentum, Inertia, and the Driving Principle: Toward a Causal Explanation of the Equivalence Principle?

1. Revisiting an Ancient Question Without Returning to an Ancient Physics
2. Projectile Motion and Its Limits

3. Motion and Relational Space
4. Momentum as a Directional Modification
5. Proper Mass, Directional Mass, and Omnidirectional Mass
6. From Momentum to Inertia
7. From Inertia to Gravitation
8. Toward an Explanation of the Equivalence Principle
9. Why Gravity Is Not Always a Force
10. A Single Action Taking Several Aspects into Account
11. The Case of Tidal Effects
12. Why Introduce a Driving Principle?
13. An Immanent and Relational Mode of Action
14. Mechanical Action and Relational Action
15. The Driving Principle Is Not an Additional Force
16. The Same Problem Applied to Light
17. What This Hypothesis Could Contribute
18. What This Hypothesis Does Not Yet Demonstrate
19. From Conceptual Explanation to Physical Testing

Chapter 11 — From a Relational Conception to Experimental Verification

1. Three Conceptions to Be Distinguished
2. Why a Relational Conception Is Not Reducible to Lorentz
3. Two Physically Different Meanings of Motion
4. The Principle of a Discriminating Experiment
5. Relational Length Contraction
6. Effective Size and Relation to Size
7. Atomic Clocks: What Motion Modifies Their Rate?

8. The Twin Paradox as an Experimental Principle
9. Motion and Gravitation: The Problem of Configuration
10. An Experiment Concerning the Equivalence Principle
11. An Onboard Interferometric Experiment
12. The Role of Acceleration
13. Light Propagation and Spatial Configuration
14. The Shapiro Effect: An Indication, Not a Proof
15. The Sagnac Effect
16. Why Michelson–Morley Experiments Are Not Sufficient
17. Doppler Effects and Signal Propagation
18. The Value of Round-Trip Experiments
19. The Difficulty of Measuring the One-Way Speed of Light
20. A Discriminating Experiment Must Produce Two Predictions
21. Defining the Spatial Configuration
22. From Momentum to a Measurable Quantity
23. Tidal Effects as a Means of Distinction
24. What the Experiment Must Be Able to Refute
25. The Necessary Role of Mathematical Formulation
26. A Necessary Collaboration
27. From Conceptual Reflection to Experimental Verification
28. A Work That Must Continue to Evolve

Chapter 12 — From the Law of Excluded Middle to the Included Middle: Toward a Relational Conception of Reality

1. Returning to the Logical Starting Point

2. From the Excluded Middle to the Included Middle
3. A Relational Physical Reality
4. Is Relation Sufficient?
5. From the Included Middle to the Hidden Middle
6. Returning to the Question of Causality
7. Reality, the Real, and Levels of Intelligibility
8. The Conceptual Postulate and the System of Thought
9. Discernment and the Limits of Rationalization
10. The Same Requirement, from Beginning to End

Conclusion

1. A Logical Difficulty as a Starting Point
2. From Time to the Present
3. From Space to Relation
4. Relative Motion and Motion Relative to the Spatial Configuration
5. Motion and Causality
6. Momentum, Inertia, and Gravitation
7. From Conceptual Distinction to Experimental Testing
8. The Present Limits of the Proposal
9. The Driving Principle: Result or Hypothesis?
10. A Proposal Open to Criticism
11. From the Description of the World to the Question of Its Foundation

APPENDIX 1 — Interview Published in Science Fiction Magazine

**APPENDIX 2 — Letter to Richard Taillet — January
27, 2024**

**APPENDIX 3 — Letter to Philosophie Magazine —
October 3, 2023**

APPENDIX 4 — Rovelli, Klein, and Time

BIBLIOGRAPHY
